

IAM Session Management Performance Report

Overview

This document captures the performance characteristics of the session management module within the IAM system.

Environment: Local Development

Base URL: http://localhost:8080

Date: 18 June 2026

Scope: Session Management APIs (Successful Requests Only)

1. Active Session Retrieval

View Active Sessions

Endpoint	Method	Status	Response Time
/api/v1/sessions	GET	200	116 ms

Observation

- Endpoint successfully retrieved session information.
- Response time remains within acceptable limits for a session management operation.
- Likely operations performed:
 - User authentication validation
 - Session lookup
 - Session data mapping
 - Response serialization

Optimization Considerations

- Monitor performance as session volume increases.
 - Review database indexing on session-related tables.
 - Consider pagination if session count grows significantly.
 - Evaluate caching strategies for frequently accessed session data.
-

Summary Metrics

Metric	Value
Fastest Endpoint	116 ms

Metric	Value
Slowest Endpoint	116 ms
Average Response Time	116 ms
Success Rate	100%

Key Findings

1. Session Retrieval Performance is Stable

The session retrieval endpoint performs efficiently and remains well below common API latency thresholds.

2. No Immediate Performance Concerns

Current response times indicate that session retrieval is not a bottleneck within the IAM system.

3. Suitable Baseline for Future Comparison

This measurement serves as an initial benchmark for future optimization and scalability testing.

Optimization Priority

Low Priority

- Session retrieval optimization
- Session query tuning
- Response payload reduction (if required)

Monitoring Required

- Performance under increased session volume
 - Database query execution time
 - Impact of concurrent session access
-

Notes

- Metrics were collected from a local development environment.
- Values represent baseline measurements prior to optimization efforts.
- This document will be used for future performance comparison and benchmarking.
